

## **BLINK SOLAR**

# **220V uninterruptible power supply installed in distribution box**

## Overview

---

What is a distribution box?

A distribution box is the heart of any electrical system. It takes the incoming power and safely distributes it to different circuits throughout your building. Whether in a home or an industrial facility, this box keeps your electrical setup organized, functional, and efficient.

What are the two modes in an ups?

The two modes within these UPSs are a high-efficiency, eco-mode and a premium power protection mode. The UPS can switch between these two modes automatically when it detects problems in the utility power. This functionality can save a significant amount in operating expenses. Need to calculate your total electrical load?

.

What is a volt-ampere (VA) rating for an ups?

UPSs are given a power rating in volt-amperes (VA) that range from 300 VA to 5,000 kVA. This rating represents the maximum load that a UPS can support, but it shouldn't match exactly the power load you have. To allow room for growth, the best practice is to choose a UPS with a VA rating that is 1.2x the total load you need it to support.

How do I know if my distribution box is safe?

After installing your distribution box, it's important to check everything before turning on the power. This helps keep the system safe and running smoothly. Start with a visual check. Make sure all wires are secure, insulated, and there's no visible damage. Look for loose connections or anything that doesn't look right.
