# **500MW of solar energy in Australia**

## Overview

---

Will a 500 MW solar farm be built in New South Wales?

Ark Energy has confirmed the development application for a 500 MW solar farm and 2,200 MWh battery energy storage system planned for northern New South Wales has been lodged with the state planning department.

How much solar power does Australia have?

Collectively, these systems represent 4.02GW of capacity. Based on a population of 6,704,300 – (December 2022 – ABS), this works out to 600 watts of solar installed for each woman, man and child in the state compared to the Australian average of approximately 780 watts per person.

How much does a 50kw Solar System cost in Australia?

For a more exact figure, contact our specialists for a free quote. For commercial 50kW solar systems in Australia you will be looking at starting prices of \$45,000 to \$50,000 after rebate, excluding GST. For higher quality components from top tier manufacturers with highly efficient inverters the prices will start from \$55,000.

Is solar energy economically viable in Australia?

Although solar energy is more abundant in Australia than other renewable energy sources, plans for expanding solar energy in Australia generally rely on subsidies to be economically viable. There are currently only a small number of proposed commercial solar energy projects, mostly of small scale.
