5g private network base station mobile command communication system

Overview

What is China's first military-grade mobile 5G base station?

Please contact us for more information. China unveils the world's first military-grade mobile 5G base station, developed by China Mobile Communications Group and the PLA, designed for battlefield use to enable seamless communication for up to 10,000 military robots and drones within a 3-kilometer radius.

Why is private 5G important for military communication?

Military communication security is paramount. Private 5G offers several advantages: **Dedicated Network:** Eliminates the risk of unauthorized access from users on public networks. **Advanced Encryption:** Military-grade encryption protocols safeguard sensitive data transmission, protecting classified information and operational plans.

Can a 5G base station be used autonomously?

When operating near existing 5G civilian areas, the PLA also has ways to piggyback China's 4.2 million base stations. This can be achieved autonomously and in "the blink of an eye."

Can a 5G ground station be mounted on a military vehicle?

For this reason, the PLA has developed its own mobile 5G ground station technology that can be mounted, in theory, on any existing military vehicle. This mountable system houses three or four 5G "antenna" drones that can take off and land alternatively to maintain constant 5G coverage.
