What is a 96V MPPT solar charge controller?

A 96V MPPT (maximum power point tracking) solar charge controller is a device that is used to regulate the charging of a 96V battery bank from a solar panel array. It is typically used in off-grid solar power systems, such as those found in RVs, boats, cabins, and other remote locations.

Can 96V 100A MPPT solar controllers be installed in parallel?

DC loads output In an off-grid solar power system project in the desert, the customer installed 4pcs 96V 100A MPPT Solar controllers in parallel. This feature is particularly useful for larger solar energy systems where a single controller may not be sufficient to handle the total solar panel capacity.
