A hybrid type of folding containers for an Irish chemical plant

Overview

What are intermediate bulk containers used for?

Intermediate bulk containers are often used to store particularly dangerous chemicals, but they can also be used to house other pharmaceutical products like edible liquids and lubrication. As they can be reused and recycled relatively easily, they're one of the more environmentally-friendly packaging solutions for chemicals.

What is a jerrican container made of?

They are often made of high-density polyethylene (HDPE) and have a capacity of up to 1,000 liters. Jerricans: These are smaller containers made of plastic or metal, usually with a capacity of 5-30 liters. They are used for storing and transporting smaller quantities of chemicals.

What materials are used for chemical containers?

Below are the most commonly used plastic materials for chemical containers and their applications: 1. High-Density Polyethylene (HDPE) Strong chemical resistance – Suitable for acids, alcohols, and industrial cleaners. Durability – Resistant to impact, cracks, and temperature changes. Lightweight and cost-effective – Easy to handle and transport.

What are intermediate bulk containers (IBCs)?

Goodpack's Intermediate Bulk Containers (IBCs) provide an innovative, sustainable approach to meet these demands. These containers are constructed with high-quality materials that ensure safety and compliance with safety standards, making them an ideal choice for businesses looking to enhance their supply chain operations.
