Overview

What is a solar generator?

A solar generator is the combination of a portable battery bank with a solar panel. In a way, it's really two products: the portable battery bank, often called a "portable power station" that you can use to power and charge your devices, and one or more solar panels that you can use to charge the portable battery bank itself.

What are the different types of solar energy equipment?

From photovoltaic (PV) panels to inverters and batteries, these components form the backbone of any solar power system. This blog explores the various types of solar energy equipment, their functions, and how they contribute to creating efficient and sustainable solar power systems.

Can a portable power station be turned into a solar generator?

Using DJI's solar panels, you can turn your portable power station into a solar generator. This setup provides all the unlimited energy the sun has to offer, without the noise, pollution or recurring fuel payments associated with a traditional generator.

What is a portable solar generator?

Portable panels give you the ability to charge your solar generator when you need to and then pack it up for storage when you're on the go. These are often used for camping needs or for short-term use if there's a power outage and you need to charge your batteries up.
