Amber flywheel energy storage

Overview

What are Amber Kinetics flywheels?

Amber Kinetics flywheels provide firm power from intermittent renewable energy to meet industry and community requirements. As dispatchable generators, our flywheels absorb excess, release shortfall, and support network frequency and voltage requirements in transmission and distribution networks.

Are amber flywheel units buried in the ground?

For safety purposes (and I'd argue for less infrastructure) all Amber flywheel units are buried in the ground. They can reach speeds up to 9,000 rpm! Amber's M32 Units are typically arranged in a grid configuration like this and aggregated for maximum power potential. Look like whack-a-moles, don't they?

.

How does a flywheel work?

The flywheel stored energy in a spinning rotor that was connected to an electric motor that converted electrical energy into mechanical energy. To recover the energy the motor was electrically reversed and used as a generator to slow down the flywheel converting the mechanical energy back into electrical energy.

What is Amber Kinetics?

Amber Kinetics pioneered long duration flywheel energy storage and is now revolutionizing the field by providing high speed, rapid response and near unlimited cycling to optimize renewable generation and grid solutions. Amber Kinetics excels in duration, cycles, safety, and environmental sustainability.
