# **Amsterdam Communication BESS Power Station Which one has the best service**

## Overview

---

What is Bess in the Netherlands?

BESS in the Netherlands is a new and small but increasingly necessary industry. A striking growth in battery capacity began in 2021 when the total installed capacity rose by 65% compared to the previous year. This number doubled in 2022 and then tripled in 2023, reaching 621 MWh.

What is the largest stand-alone Bess in the Netherlands?

This feat overtakes the 30MW/68MWh project called Pollux by SemperPower, setting a new record for the largest stand-alone BESS in the Netherlands.

Who makes the Bess battery?

Conducting the engineering and construction of the BESS is the multinational company, Equans Netherlands. Dutch energy player, Eneco, is tasked with tweaking the battery for optimal performance, enabling it to maintain the grid's balance without escalating local congestion.

How does the Bess work?

With the BESS, you can create an energy buffer and use this energy flexibly at desired times. When power is consumed particularly during the day, the battery can be charged at night. During the day, power is then used from both the grid and the battery. In this way, we virtually increase your capacity without physically increasing your connection.
