Are rooftop solar panels durable

Overview

Should I replace my roof after installing solar panels?

The last thing you would want is having to replace your roof after installing solar panels. Removing and reinstalling a solar panel system is a complex procedure, and in many cases, you will void warranties. Ideally, solar panels should be installed on roofs that will not need a replacement during the next 25-30 years.

Are solar panels durable?

In most cases, yes. Solar panel durability is tested to withstand extreme conditions, but factors like dirt buildup, heavy rain, snow, and strong winds can impact performance. Proper installation and maintenance help ensure your system lasts for decades.

Are solar shingles a good option for a new home?

Unlike solar panels, which are installed above your roof with a racking system, solar shingles and tiles become a part of the roof. These products can be a great option for new homes, since you combine your roof and solar array into a single system, reducing the total combined installation costs.

How long do solar panels last?

With these features, solar panel durability is a key strength, allowing most panels to function efficiently for 25+ years, even in tough conditions. When temperatures rise, solar panel durability and energy output can be affected. Heat causes solar panels to lose efficiency, meaning they produce less electricity as temperatures climb.
