# BESS price trend

## Overview

---

How much does a Bess system cost?

As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing BESS Prices.

How much will the Bess market cost in 2030?

Looking ahead, it's expected the global BESS market will reach \$120-\$150 billion by 2030. The increasing level of investment in BESS has prompted competition between all major integrators seeking to capitalize on the opportunity to expand market share and capitalize on demand.

How much does Bess cost in China?

It is nonetheless still eye-opening to note just how big those differences in cost are. The average for a turnkey system in China including 1-hour, 2-hour and 4-hour duration BESS was just US\$101/kWh. In the US, the average was US\$236/kWh and in Europe US\$275/kWh, more than double China's average cost.

Is the Bess market infancy?

The development of the BESS market is still in its relative infancy, compared to more established clean energy markets. As the industry matures, there will undoubtedly be challenges along the way.
