What are supercapacitors & electrolytic capacitors?

Supercapacitors are a new type of device that stores energy through an interfacial double layer formed between an electrode and an electrolyte. Aluminum electrolytic capacitor is composed of anode aluminum foil, electrolytic paper, cathode aluminum foil, electrolytic paper, etc., 4 layers of overlapping winding;

What is an electric double-layer capacitor (EDLC)?

It realizes battery-less smart cards equipped with a display, and is suitable for secondary power supplies for wearable devices or IoT devices. The electric double-layer capacitor (EDLC) is made thinner with packaging technology where metal foil laminated film is used, and allowing maximum use of the space for the mountain thickness.
