# **Battery cabinets should all be replaced with 48v**

## Overview

---

How many battery cabinets can be connected together?

The battery cabinet is designed to be daisy-chained together with additional battery cabinets. There is no limit to the number of battery cabinets that can be connected together. However, a maximum system current of 30 A should be maintained regardless of the number of interconnected battery cabinets. Procedure NOTE! Refer to Figure 7.

Should I upgrade to a 24v battery system?

Above 480W, it may make more sense just to upgrade to a 24V battery system and not deal with such high current. You can do this either with a direct 24V battery or 2 12V batteries in series. Above 960W, it may make sense just to upgrade to a 48V system to avoid such high current.

How do I connect a battery cabinet to a power system?

Procedure 1. Furnished with the battery cabinet are battery disconnect circuit breaker alarm lead assemblies. Refer to the power system installation manual to use these alarm leads to connect the battery cabinet battery disconnect circuit breaker alarm into the power system alarm circuits.

What is a 48V lithium battery?

The 48v lithium battery is composed of 16 3.2V cells and uses lithium iron phosphate as the positive electrode material. It is composed of multiple lithium-ion cells, typically connected in series, which work together to provide the desired voltage and capacity.
