Overview

Could a new battery revolutionize electricity storage?

A new type of battery developed by Harvard scientists could revolutionize electricity storage, marking progress in battery technology. Although batteries themselves are non-renewable energy sources, rechargeable batteries can store energy from renewable resources, thereby contributing to reduced fossil fuel use.

Are batteries the future of energy storage?

Developments in batteries and other energy storage technology have accelerated to a seemingly head-spinning pace recently — even for the scientists, investors, and business leaders at the forefront of the industry. After all, just two decades ago, batteries were widely believed to be destined for use only in small objects like laptops and watches.

What is a battery storage system?

Battery storage, or battery energy storage systems (BESS), are devices that enable energy from renewables, like solar and wind, to be stored and then released. Battery storage for renewable energy will open new doors and allow for clean energy to become even more reliable, accessible and readily available. Open.

Do batteries produce electricity?

Batteries act as energy storage devices that absorb and release energy on demand, with lithium-ion being the predominant chemistry used. They do not produce electricity independently; instead, they store and provide energy generated by renewables when needed.
