Battery pack structure price

Overview

How much does a battery pack cost?

BNEF's latest report finds that a complete battery pack costs \$137/kWh in 2020, will fall to \$101/kWh in 2023, and reach \$58/kWh in 2030. In comparison, the Draft Document contains older estimates showing battery pack prices of \$143/kWh in 2020, \$112/kWh in 2023, and \$70/kWh in 2030.

What is a structural battery pack?

The structural battery pack allows for reducing the number of parts used in the battery pack and in the car itself. Together with the mega castings used for the front and rear parts of the chassis, this makes for an incredibly simple platform.

What are battery packs?

Battery packs are constructed from two or more individual cells or batteries. There are two basic types of battery packs: primary and secondary or rechargeable. Primary batteries are disposable, non-rechargeable devices. They must be replaced once their energy supply is depleted.

How much does a Li-ion battery cost in 2024?

Note: historical prices have been updated to reflect real 2024 dollars. Weighted average survey value includes 343 data points from passenger cars, buses, commercial vehicles, and energy storage. The Volta Foundation report the following view for the average Li-ion battery pack price drop of 20% from 2023 to a record low of \$115 /kWh in 2024:
