Bidirectional charging of photovoltaic folding containers at port terminals

Overview

How can bidirectional charging/discharging a battery achieve maximum PV power utilization?

In addition, with the proposed strategies, the bidirectional charging/discharging capability of the battery is able to achieve the maximum PV power utilization. All the proposed strategies can be realized by the digital signal processor without adding any additional circuit, component, and communication mechanism.

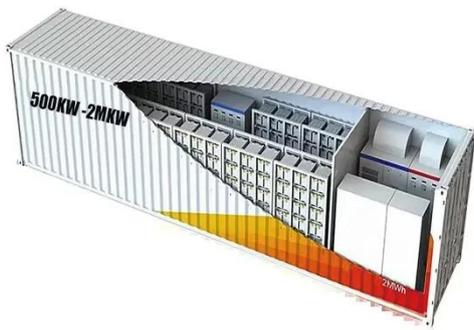

Why should a PV Charger abandon the maximum power point tracking function?

Traditionally, in order to realize these charging strategies, the PV charger should abandon the maximum power point tracking function to maintain the power flow balance. As a result, the output power of the PV array will be decreased.

What is bidirectional power flow control?

Therefore, bidirectional power flow control strategies are proposed to achieve the maximum PV power utilization as well as to realize the hybrid charging methods. In addition, with the proposed strategies, the bidirectional charging/discharging capability of the battery is able to achieve the maximum PV power utilization.

Bidirectional charging of photovoltaic folding containers at port terminals

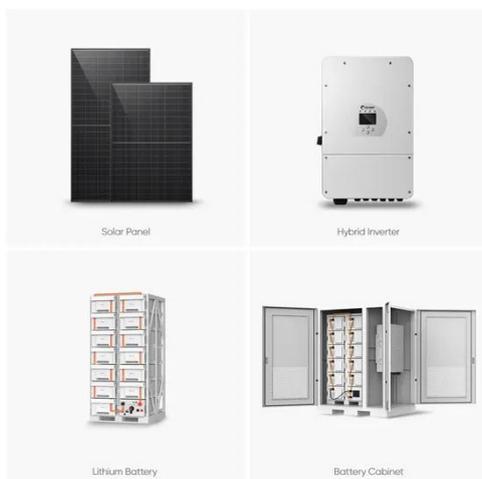

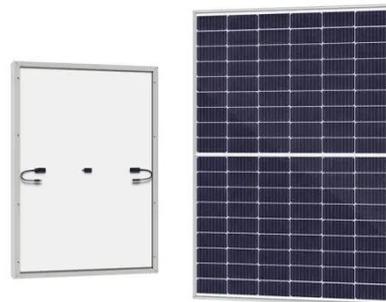

Bidirectional Charging: EVs as Mobile Power Storage

ELECTRIC CARS AS ROLLING CHARGING STATIONS: In the "ROLLEN" research project, Fraunhofer IFAM and its partners have shown how electric vehicles with bi-directional ...

A Photovoltaic-Powered Modified Multiport Converter for an EV Charger

To reduce the burden of electric vehicle (EV) charging power requirements, photovoltaic (PV) infrastructure EV charging has grown in recent years. The Z-Source Inverter ...

Design of three-port photovoltaic energy storage system ...

Abstract Three-port photovoltaic energy storage system is a key technology in the field of photovoltaic power generation, which combines photovoltaic power generation and ...

Full article: Smart charging with demand response and ...

Abstract Port terminals, especially their reefer container yards, face surging power demands. Efficient reefer charging is critical for port sustainability and efficiency, as it helps ...

Multiport bidirectional converters for off board charging ...

A MP converter with three-ports for EV charging from PV panels is proposed in literature. This MP converter considers various technical aspects to determine the efficiency ...

A q-Z Source-Based Modified Bidirectional Three-Port ...

The designs are based on a q-Z source converter and use a modified bidirectional path to accommodate the battery port. The main advantage of using one of the two proposed ...

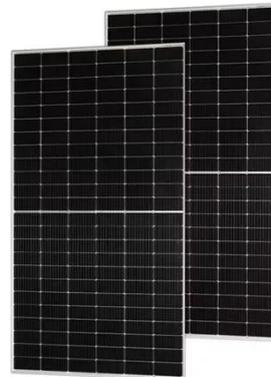

Analysis of Solar Photovoltaic Integration and Plug-in

Renewable energy-powered plug-in electric vehicle (PEV) charging stations have gained popularity in recent years, especially in commercial and business-oriented ...

Green light for bidirectional charging? Unveiling grid ...

Bidirectional charging allows for higher use of volatile renewable energies and can accelerate their integration into the power system. When considering these diverse ...

Bidirectional Power Flow Control and Hybrid Charging Strategies ...

The objective of this article is to propose a photovoltaic (PV) power and energy storage system with bidirectional power flow control and hybrid charging strategies. In order to ...

Full article: Smart charging with demand ...

Abstract Port terminals, especially their

reefer container yards, face surging power demands. Efficient reefer charging is critical for port ...

JETIR Research Journal

In this study, a bidirectional four-port converter powered by photovoltaics (PV) and combined with battery accumulating system (BAS) is designed and simulated. By facilitating ...
