# **Boston solar Power Station Energy Storage Project**

## Overview

---

How many energy storage facilities are there in Massachusetts?

The Massachusetts Energy Siting Facilities Board has approved two energy storage facilities with a combined capacity of 400 MW/800 MWh. This decision overturns previous rulings that hindered the development of these facilities. Once operational, they will fulfill 80% of the state's 1 GWh energy storage deployment target for 2025.

What is the energy storage initiative?

It can improve grid operations, reduce energy costs, provide backup power through storms, and benefit the local economy. The Energy Storage Initiative aims to make the Commonwealth a national leader in the emerging energy storage market requiring a 1,000 Megawatt hour (MWh) energy storage target to be achieved by Decem.

Why did the Commonwealth overrule solar and storage projects?

The Commonwealth overruled the decisions of its own siting boards and one town's moratoria on all solar and storage projects, paving the way for the imminent construction of two significant energy storage facilities.

Why should we invest in energy storage technology?

Advancements in Energy Technology: This project represents a significant investment in cutting-edge energy storage technology. It could lead to advancements and cost reductions in battery technology, making energy storage more accessible and efficient for other regions and projects.

## Boston solar Power Station Energy Storage Project
