# **Build a solar solar container power supply system at home**

## Overview

---

Can You DIY a solar system?

And, as we covered in our previous article, many states restrict residents from connecting a DIY system to the power grid. With the right tools, simple energy-use calculations, and foundational electrical knowledge—or by using beginner-friendly solar kits—you can successfully build a small off-grid system.

Can you build your own Solar System?

Whether you're preparing for a more sustainable lifestyle, reducing your reliance on the grid, or just powering a cabin or van, building your own solar system can be incredibly rewarding. In this guide, we'll walk through the entire process, step by step, with clear language and practical tips—no electrical engineering degree required.

Is DIY solar a good idea?

If you're considering DIY solar, starting with a small off-grid system, such as a ground-mounted or portable unit, is significantly safer and more manageable than installing a full rooftop or grid-tied system.

How much power does a DIY solar system use?

This isn't our first rodeo - we have a similar install video of our much larger, more complicated DIY solar system - it has 10kw of solar, 28kwh of lithium battery storage, and 5000w of 120V AC power. We'll be referring to this project a lot as it informed a lot of the decisions we've made for this system.
