Can solar panels be shipped

Overview

Is freight shipping necessary for solar panels?

Solar panels often require freight shipping services due to their oversized dimensions and the need for careful packaging. Freight shipping solar panels involves protecting the fragile cargo from damage during transit and ensuring careful and on-time delivery. It takes the right freight partner to ensure solar panels are transported safely.

How do solar panels get shipped?

Solar panels, such as those manufactured in Taiwan, are typically shipped via ocean freight to Long Beach, California. Subsequently, they may be transported via full truckload shipping to a distributor's warehouse in Miami, Florida. Large solar panels, like those used on solar farms, might require oversized freight shipping services.

What is the shipping cost for this solar panel?

The standard shipping charge for up to 11 solar panels is \$250. For every additional 4 panels, the shipping cost is increased by \$25. In the event, the product is only available on the East or West coast, a custom quote will be sent to you before the order is processed.

Should solar panels be protected during shipping?

Solar panels are expensive and valuable, so protecting them during the shipping process is necessary. Solar panels are typically stacked in a box or crate prior to shipping. They can be stacked horizontally or vertically, depending on the panel's dimensions.
