# **Can the inverter be charged by solar energy**

## Overview

---

Can a solar inverter charge a battery if a utility is not available?

Utility will charge battery only when solar energy is not available. Solar energy and utility will charge battery at the same time. Solar energy will be the only charger source no matter utility is available or not. If this inverter/charger is working in Battery mode or Power saving mode, only solar energy can charge battery.

How many batteries can a solar inverter charge?

This applies to all types of solar inverters regardless of size. The number of batteries you can connect to an inverter cannot be more than 12 times the inverter charging current. A 20A charger can handle 240ah battery maximum. The formula is  $A \times 12 = \text{battery capacity (ah)}$ . If it is a 40A charger the limit is 480ah.

Should you own a solar battery and charge it with electricity?

Owning a solar battery and charging it with electricity would have not to point in having them in the first place. Solar batteries are designed to store power from renewable energy. Charging them using the local grid would increase your electricity consumption and add additional charges on top of your electricity grid.

How to charge a solar inverter with adjustable power?

Instruction of using adjustable power to charge the Solar inverter: The adjustable power is decided by the Solar inverter input power, for the single phase/3 phase 220v Solar inverter, we use 220v AC/2A Regulator.
