

BLINK SOLAR

Canada s ultra-large capacity photovoltaic container

Overview

On May 7th, 2025, CATL has unveiled the world's first mass-producible 9MWh ultra-large-capacity energy storage system solution, TENER Stack, setting a new industry benchmark with its groundbreaking technology. What is Canada's role in developing and deploying photovoltaic energy technologies?

Our primary mandate is to help develop and deploy photovoltaic energy technologies in Canada. To this end, two strategic approaches are being taken. The 1st is to accelerate the deployment of solar power in Canada, while the 2nd aims at exploiting solar energy's potential, both nationally and internationally.

What types of energy storage are available in Canada?

There are three main types of energy storage currently commercially available in Canada: Storage is playing an increasingly important role in the electricity system by improving grid reliability and power quality, and by complementing variable renewable energy sources (VRES) like wind and solar.

Who is Canadian Solar?

Over the past 24 years, Canadian Solar has successfully delivered over 15 GW of premium quality, solar photovoltaic modules to customers. Since entering the project development business in 2010, Canadian Solar has developed, built, and connected over 12 GWp of solar power projects and 6 GWh of battery energy storage projects across the world.

How many solar panels will be installed in Canada by 2040?

According to the Canada Energy Regulator (previously the National Energy Board), By 2040, solar power will account for approximately 3% of total energy generation capacity in Canada. It's a huge project, with 1.3 million solar panels to be installed on 3300 acres of land east of Champion, Alta.
