

BLINK SOLAR

Canberra Off-Grid Solar Container 20ft for the Food and Beverage Industry

Overview

What is a solar powered shipping container?

At SCS Australia, we create solar powered shipping containers that combine renewable energy technology with the strength and mobility of a shipping container. These self-sufficient units are ideal for powering off-grid operations, mobile businesses, events, and remote projects—all while reducing carbon footprint and cutting energy costs.

What are the advantages of a container roof solar system?

1. Integrated Solar Array High-efficiency solar panels installed on the container roof or fold-out frames.
2. Battery Energy Storage Lithium-ion or deep-cycle batteries store energy for use day or night.
3. Inverter & Control Systems Converts solar power to usable electricity with smart monitoring.
4. Weatherproof & Secure.

How can a container office help reduce energy costs?

Emergency Response: Set up off-grid container offices as command centers during emergencies, ensuring essential services remain operational. Applying Thermoshield liquid thermal insulation significantly reduces energy consumption by minimizing heat loss in winter and heat gain in summer. This popular solution helps keep energy costs low.

What makes off-grid pods® unique?

Strong steel, extensive R&D, industry leading components and durable paint coatings enables Off Grid Pods® to operate in extreme environments. Add more solar panels, batteries, a back up generator, water desalination or waste water system to create a custom solution that meets your unique needs.
