Comparison of 10kW Photovoltaic Container Power Generation with Diesel Power Generation

Overview

Can a diesel generator be used as a photovoltaic system?

In combination, diesel generators and photovoltaic systems are very well suited to energy supply in areas with an unstable or non-existent mains supply. The additional use of solar energy reduces fuel consumption, which saves costs. Furthermore, the integration of a PV system brings a sustainable factor into the system.

What is a photovoltaic system?

This system includes solar, storage, and diesel power, with diesel generators as the main power source. Compared to TYPE A, the addition of an energy storage system allows for an increase in the capacity of the photovoltaic system.

Can a diesel generator be converted into a solar/diesel hybrid system?

For this reason, there is a clear financial justification for converting almost every diesel-powered system into a solar/diesel hybrid system. Every unused diesel kWh saves money. The combination of diesel generators with PV systems quickly pays for itself through the large savings in fuel costs.

What is the difference between diesel generator and PV/diesel system?

In PV/diesel system, diesel generator is used to generate power when sunlight is not accessible. Compared to a diesel-only system, PV/diesel system not only decreases the atmospheric pollutants of carbon (CO x), sulphur (SO x) and nitrogen (NO x) emissions but also decreases the power generation costs.
