Complex Solar System

Overview

Is there a complex structure at the edge of the Solar System?

This new discovery suggests a complex structure at the edge of the Solar System, challenging our understanding of its formation. The observed objects hint at a larger, previously unobserved population of bodies beyond what was traditionally considered the Solar System's boundary. An illustration of the smallest Kuiper Belt Object.

What is a small body in the Solar System?

Any natural solar system object other than the Sun, a planet, a dwarf planet, or a moon is called a small body; these include asteroids, meteoroids, and comets. Most of the more than one million asteroids, or minor planets, orbit between Mars and Jupiter in a nearly flat ring called the asteroid belt.

What is the Orion molecular cloud complex?

This area is known as the Orion molecular cloud complex. According to a new study, scientists report that our solar system was once located in a specific structure within those giant clouds in space, the Radcliffe Wave. Image via Rogelio Bernal Andreo / Wikimedia Commons (CC BY-SA 3.0).

Did the formation of the Solar System create multiple 'rings' of debris?

The presence of these objects suggests that the formation of the Solar System may have created multiple "rings" of debris, extending farther than previously believed. The observed gap between the Kuiper Belt and this new outer ring resembles patterns seen in the formation of other planetary systems.

Complex Solar System

Solar system research prospects for the decade and beyond

Our solar system, consisting of the Sun, planets, Moons, asteroids, and comets, along with gas, dust, ice, and radiation, is a very complex and dynamic system. Globally, ...

The complex planetary synchronization structure of the solar system

The complex planetary synchronization structure of the solar system, which since Pythagoras of Samos (ca. 570-495 BC) is known as the music of the spheres, is briefly ...

-  **Efficient Higher Revenue**
 - Max. Efficiency 97.5%
 - Max. PV Input Voltage 600V
 - 100% Peak Output Power
 - 2 MPPT trackers, 100% DC Input Utilizing
 - Max. PV Input Current 15A, Compatible with High Power Modules
-  **Intelligent Simple O&M**
 - IP68 Protection Degree: support outdoor installation
 - Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
 - DC & AC Type II SPD: prevent lightning damage
 - Battery Reverse Connection Protection
-  **Flexible Abundant Configuration**
 - Plug & Play, EPS Switching Under 20ms
 - Compatible with Lead-acid and Lithium Batteries
 - Max. 6 units Inverters Parallel
 - AFCI Function (Optional): when an arc fault is detected the inverter immediately stops operation
