# Connecting solar panels to combiner boxes

## Overview

---

How to install a solar panel combiner box?

Use the mounting brackets that come with the box. Secure it firmly to the wall or a sturdy surface. Make sure it's level and stable. Start by turning off the power. Then, connect your solar panel wires to the combiner box's input terminals. Make sure each wire is connected to the correct terminal. Double-check to avoid any mix-ups.

What should be prepared before installing a solar combiner box?

Before installing a solar combiner box, prepare the following parts: A solar battery bank (lead-acid, lithium-ion, etc.) A solar charge controller A solar panel A working, direct current (DC) lamp with a switch. Once you are ready, put the solar combiner box in place.

How does a solar combiner box function?

A solar combiner box binds multiple strings of photovoltaic (PV) modules into one standard bus. It connects the strings to the PV inverter. According to Northern Arizona Wind & Sun, for solar combiner boxes between 12 and 48 volts, it's a must to use breakers in place of fuses.

What is a PV combiner box?

It is responsible for combining and protecting the multiple strings of solar panels or photovoltaic modules that make up the solar array, before connecting them to the inverter. The PV combiner box acts as a junction box, bringing together the positive and negative wires from each string of solar panels.
