A dynamic, techno-economic model of a small-scale, 31.5 kWe concentrated solar power (CSP) plant with a dish collector, two-tank molten salt storage, and a sCO<sub>2</sub> power block is analysed in this study. Plan.

How can solar energy be stored in a storage unit?

The major challenge now a days is to store the excess energy ,when the demand is low, and reuse this energy later or when needed. This energy can be stored in a Storage unit called „Battery“. Power from grid connected solar PV units is generated in the form of few KW to several MW.

How a solar energy storage system works?

The system has been developed by using some latest developed solar radiation collection technologies to generate the required energy for various applications. The thermal storage tank in the system achieved the maximum temperature of water on a normal day in summer around 110 °C.

How a grid tied solar power generation is a distributed resource?

The output of a grid tied solar power generation which is a distributed resource can change very quickly. Solar power can be integrated into the grid by the help of Battery Energy Storage System .Real and reactive power can be absorbed and delivered by the photovoltaic systems with very few response times.

Can solar power be used as a backup supply?

The widespread adoption of solar power generation posses significant challenges both in transient and steady state operation. This application is Valuable for both voltage and frequency regulation and also serving as a backup supply during system faults or unavailability of renewable energy. II.
