## Overview

---

Liquid fuels Natural gas Coal Nuclear Renewables (incl. hydroelectric) Source: EIA, Statista, KPMG analysis Depending on how energy is stored, storage technologies can be broadly divided into the follo.

How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).

What are the different types of energy storage technologies?

Depending on how energy is stored, storage technologies can be broadly divided into the following three categories: thermal, electrical and hydrogen (ammonia). The electrical category is further divided into electrochemical, mechanical and electromagnetic (Figure 2).

What is distributed energy resources (DG)?

As a result, the idea of DG arose, in which several tiny, largely renewable power-producing sources termed distributed energy resources (DERs) are connected to the grid and produce electricity where needed most, at or near the load centers.

What are the benefits of distributed energy resources?

Distributed energy resources offer multiple benefits to consumers, support decarbonisation, and improve resilience The primary beneficiaries of DERs are the consumers who own them. Distributed PV can supply affordable electricity to households and businesses, reducing their dependence on the grid.
