# Does a camper need an outdoor power source

## Overview

---

Do you need a power supply in a motorhome?

Whether lighting, fridge or heating - a reliable power supply in your motorhome is the be-all and end-all of your journey. And here you can find out everything you need to know - for full power when camping! On holiday, the camper or motorhome becomes our home away from home, our home on four wheels.

Will a motorhome work if you don't have a power source?

Pretty much everything electrical in your motorhome will work when you're hooked up to mains power at a campsite. But when you're not, some of the onboard appliances may not work. Neither will the equipment you want to plug in to the power points. That's why motorhomes have alternative power sources.

Can a camper use solar power?

Solar power is an eco-friendly and renewable energy source that has gained popularity among campers. Solar panels can be installed on the roof or sides of a camper to harness sunlight and convert it into electricity. This energy can then be stored in onboard batteries for later use.

How much power do you need for a camping trip?

You can use a watt meter to measure power usage, or you can manually calculate each device's power needs by multiplying the expected hours of use per day by the amps drawn by the device and the voltage it operates at. For a simple overnight camping trip with just phone charging and basic lights, a power station of 100-200 Wh is usually sufficient.
