# **EU Base Station Battery Project Tender**

## Overview

---

Are Li-ion batteries a threat to Europe's energy transition?

Li-ion batteries play a crucial role in Europe's energy transition, yet production dominance lies with China, Korea, and Japan. To counter this dependency, Europe plans to establish 25 new gigafactories amounting to EUR 35 billion by 2030. However, defects are anticipated to occur at rates ranging from 15 % to 30 % during the initial ramp-up phase.

What is the EU-funded mebattery project?

The EU-funded MeBattery project aims to lay the foundations of a next-generation battery technology that will potentially help overcome the critical limitations of established flow and static battery systems in energy storage. The proposed battery technology will leverage the intrinsic benefits of a redox flow battery system.

What is batteries Europe?

Batteries Europe is the platform bringing together all relevant stakeholders in the European batteries research and innovation ecosystem in order to develop and support a competitive battery value chain in Europe.

Why has Brussels stepped up its support for industrial battery production?

In a context of increasing global competition and urgent climate challenges, Brussels has stepped up its support for technological innovation and industrial battery production, aiming to reduce its reliance on third countries and to ensure the stability of the European energy system.
