EU New Energy Storage Cabinet

Overview

What is the European Commission doing about energy storage?

In 2020, the European Commission published a study on energy storage, which summarized some previous studies and reports, explored current and potential energy storage markets in Europe, and set out policy and regulatory recommendations for energy storage.

How does energy storage work in the EU?

The main energy storage method in the EU is by far 'pumped storage hydropower', which works by pumping water into reservoirs when there is an electricity surplus in the grid - for example on a sunny or windy day - and releasing it when more energy is needed.

What is the European energy storage inventory?

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the first European-level tool of its kind and offers energy storage data across a full range of technologies.

How many energy storage projects are there in Europe?

The European Energy Storage Inventory provides impressive figures on the current state of energy storage capacities in Europe. According to the platform, 905 projects with a total output of 66 gigawatts are currently in operation.

EU New Energy Storage Cabinet

EU plans 2025 energy storage package

The European Commission has announced a European Grid Package, to be launched in the final quarter of the year, which will focus on driving energy storage capacity to ...

Economic outlook for Europe's battery storage improving under new

The economics of battery storage systems (BESS) in Europe look much rosier following changes to the European Union's (EU) power pricing structure in October, with ...

Energy storage

The main energy storage method in the EU is by far 'pumped storage hydropower', which works by pumping water into reservoirs when there is an electricity surplus in the grid - ...

The European Energy Storage Inventory: A comprehensive ...

Europe's energy storage at a glance, efficient and future-oriented. A comprehensive inventory of energy storage solutions. Data and facts for experts easily ...

Statement on the European Grids Package

European Commission published the Grids Package, addressing critical bottlenecks in grid connections, permitting, and infrastructure planning. These issues have ...

Europe's Battery Storage Additions Set for 45% Jump in 2025

13 hours ago Europe's battery storage sector is entering a period of rapid scale-up, with annual deployments set to climb from 11 GW in 2024 to 16 GW in 2025, a 45% year-over-year ...

New Energy Storage Cabinet Production

By providing instant and zero-carbon energy, our storage portfolio allows grid

stabilization. Energy storage creates new revenue streams. For example, it allows expansion of the grid by ...

EU Grids Package Calls for EUR240B Hydrogen Investment

The European Commission's Grids Package aims to modernise the EU's power grid infrastructure, including EUR240 billion in hydrogen transport and storage networks.

European Energy Storage and New Energy: Powering the ...

Europe's Storage Boom: More Than Just Batteries Let's break this down: Europe added a jaw-dropping 17.2 GWh of new energy storage in 2023 - that's enough to power 1.7 ...

EU plans to upgrade energy infrastructure to lower bills and ...

The Commission presented new initiatives to establish a fully

interconnected EU energy system, enabling clean and affordable energy to flow freely across the EU.

EU plans 2025 energy storage package

The European Commission has announced a European Grid Package, to be launched in the final quarter of the year, which will focus ...

Statement on the European Grids Package

European Commission published the Grids Package, addressing critical bottlenecks in grid connections, permitting, and ...
