EU container refrigerated generators

Overview

What is a genset on a reefer container?

The Genset, also known as a Clip On Generator, is a handy unit that clips onto the chassis of a Reefer Container to provide power when an external source of power is not available, such as during transport. Our Gensets run on diesel, gasoline or gas. Disc type radial fan for cooling: Sealed large diameter rear bearing.

Which generator sets are best for refrigerated container units?

The most rugged, dependable and easy-to-operate generator sets for refrigerated container units. Carrier's industry-leading PowerLINE Generator Sets are designed and built for continuous, unattended operation for all refrigerated containers transported by road or rail worldwide.

Can a generator run a refrigerated container?

A generator can be an important addition to your refrigerated container. A diesel generator is able to run a container for up to 5 days without the need to refill fuel. At MT Container GmbH in Hamburg, you can buy or rent generators for your containers, of course always after a comprehensive expert consultation.

How to choose a generator for a reefer container?

An undermount generator is especially suitable if you want to transport by frequently changing containers by truck. A generator of this type has a weight of around 700 kilograms. Clip on generators can be installed on the reefer container, therefore fitting more flexibly. Mounting and replacement can be done within minutes.
