East Asia Off-Grid Solar Container 2MW Transaction

Overview

Should Southeast Asia have a solar grid?

An ASEAN grid will allow the Republic, which lacks access to most renewable energy options other than solar, to tap sources such as wind energy and hydropower in other countries. Such a grid also allows countries in Southeast Asia, where renewable resources are unevenly distributed, to trade electricity freely to meet rising demand.

Why does Southeast Asia need a power grid?

The ASEAN power grid allows countries in Southeast Asia to trade electricity freely to meet rising demand, among other benefits. Southeast Asia is a developing region with a huge appetite for energy, and investors in China, South Korea, and Japan are now finding promise in investing in renewable energy projects in ASEAN.

Should the ASEAN Power Grid be sold before investors crowd-in?

Ms Dinita Setyawati, a senior energy analyst at energy think-tank Ember who also spoke at the webinar, said that while the ASEAN power grid has attracted “a lot of interest” from development partners who are interested in selling their technologies, the project has to first materialise before investors crowd in.

Will PV demand increase in Southeast Asia by 2028?

PV demand in Southeast Asia is expected to rise by over 70% by 2028, but issues remain regarding grid capacity, slow approvals, and policy hurdles. Governments must enhance cooperation, upgrade grids, and accelerate projects to support the energy transition.
