# Energy storage cabinet battery labeling

## Overview

---

Why are PV and battery labels required?

PV and battery labels are required to meet certain standards in order to be durable for the entire life of the system. The requirements listed in 2.1.2 ensure that the labels used meet the compliance requirements for the specific system type. NOTE – The following is an amalgamation of the requirements across the standards.

What are battery labeling standards?

Battery labeling standards differ across various regions and regulatory organizations. A common theme among these standards is the requirement for clear and durable labels that provide critical information, such as battery chemistry, capacity, manufacturer details, and safety warnings.

Why do battery labels need to be updated?

Emerging battery chemistries, such as solid-state, lithium-sulfur, and sodium-ion batteries, necessitate continuous updates to labeling requirements to align with evolving safety, performance, and regulatory considerations. Maintaining accurate and up-to-date labels requires ongoing monitoring and adaptation.

Do lithium-ion batteries need warning labels?

Warning labels (or marking) of these batteries are essential to ensure safe handling, operation, and disposal, thereby mitigating potential safety risks and preventing accidents. This paper examines the labeling practices of over 200 lithium-ion cells from 20 manufacturers and 6 countries and reviews changes in warning labeling from 2003 to 2023.

## Energy storage cabinet battery labeling
