# Energy storage equipment for chemical industry

## Overview

---

How efficient are electrochemical storage systems?

Electrochemical storage systems, notably lithium-ion batteries, have demonstrated round-trip efficiencies as high as 90% and energy densities of approximately 150–250 Wh/kg [31, 33].

What is CES chemistry?

In the literature, the concept of CES refers to the process of storing energy in the form of chemicals. Electrical energy is used to produce chemicals that can be stored and used at a later date depending on their demand. When the stored energy is set to be used, the chemical substance undergoes combustion.

What platforms are used to search for energy systems and storage technologies?

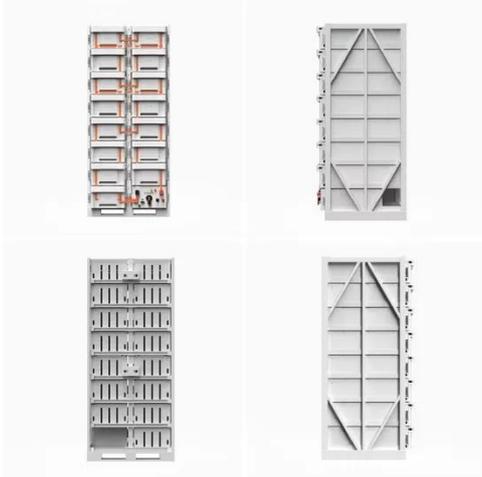

Searches were conducted using the Scopus, Web of Science, Google Scholar, and ScienceDirect platforms, complemented by a manual selection from institutional and governmental websites relevant to energy systems and storage technologies.

Why do we need energy storage systems?

Decarbonizing the energy sector is essential, with the Energy Storage Systems (ESS) being of great importance in the achievement of this goal. These technologies enhance the integration of renewable sources, improving supply stability and efficiency, thus facilitating the transition to a more sustainable energy model.
