# **Energy storage project construction standards**

## Overview

---

Ensuring safety and compliance with relevant codes and standards, such as the International Fire Code, NFPA 1 Fire Code, NFPA 855, UL 9540, and UL 9540A, is crucial in the manufacturing, construction, installation, and operation of energy storage systems. Does industry need standards for energy storage?

As cited in the DOE OE ES Program Plan, “Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards . ” [1, p. 30].

Can the energy storage industry access critical tools for 100 mw projects?

The DOE sponsored an effort to gather input from traditional risk products and finance providers serving more established technologies (e.g., wind, gas generation) to identify how the energy storage industry can access critical tools needed for 100 MW or larger scale projects. The resulting report, published in 2019, is a best.

What safety standards affect the design and installation of ESS?

As shown in Fig. 3, many safety C&S affect the design and installation of ESS. One of the key product standards that covers the full system is the UL9540 Standard for Safety: Energy Storage Systems and Equipment . Here, we discuss this standard in detail; some of the remaining challenges are discussed in the next section.

How can energy storage C&S help the development of ESS projects?

The resulting report, published in 2019, is a best [311] on how energy storage C&S can help facilitate the use of risk and financial tools needed for the development of larger ESS projects. Another financial example comes from the experiences of solar photovoltaic (PV) installation.
