# **Estonia s anti-dumping measures on household energy storage**

## Overview

---

How can Estonia reduce its energy consumption?

The Directive requires Estonia to reduce primary energy Renewables share total 65 % of final energy consumption Increasing the share of renewable energy using fossil fuels boilers exchange renewable fuels; fuel-free energy sources electricity generation; renewable fuels and —electrically vehicles New 100 % renewable electricity.

How does Estonia promote energy storage?

Estonia plans, in particular through market -based measures, to promote the entry of storage into the market, including by removing the market barriers stemming from the legislation. A pilot energy storage programmem has also been launched<sup>150</sup>to support electrical storage (the pilot programme is being implemented).

What does the IEA say about Estonia?

The IEA commends Estonia for the steps it has taken to end all remaining energy trade with Russia while ensuring regional energy security, and for the work to accelerate the energy transition, including setting a 2050 carbon-neutrality target and a target for 100% of annual electricity demand to be covered by renewable energy by 2030.

What is the energy consumption of buildings in Estonia?

In 2022, the energy consumption of buildings in Estonia accounted for 53 % of the total energy balance<sup>73</sup>. Buildings mainly consume electricity, gas and heat, the latter representing the largest share of the energy consumed. In 2022, renewable energy accounted for 52% of final energy consumption in the building stock and 38.574.
