Is energy storage a good investment in Europe?

Compared to classic renewables, energy storage has really only become an investable asset in Europe over the last few years on the back of technology advances, market price signals, and government support mechanisms.

How do energy storage assets make money in Europe?

For short-duration energy storage assets, there are really three key revenue streams for energy storage assets in Europe. The first one is capacity payments, which have become a broadly implemented policy measure by governments to support system reliability and incentivize the installation of certain new power asset types.

Is the energy storage industry aligned with the industry's needs?

The country's policy and regulatory framework, while recognising the energy storage assets in the system, is yet to be aligned with the industry's needs. Fundamental regulatory changes are required in areas such as charges payable by the storage units or the tax incidence. Recent steps taken indicate progress.

What is the growth rate of energy storage in Germany?

Comparatively, the residential and commercial/industrial sub-segments have had annual growth rates of 52% and 24%, respectively, during the same period. Almost 80% of the total installed energy storage capacity base, worth 7GWh, is from the residential sub- segment. Germany is among the top European countries in residential battery storage market.
