# **Financing for Mobile Energy Storage Container Projects**

## Overview

---

Why is project finance difficult for energy storage?

It has traditionally been difficult to secure project finance for energy storage for two key reasons. Firstly, the nascent nature of energy storage technology means that fixed income lenders and senior debt providers are naturally risk averse.

Is battery storage a good investment?

Battery storage has less of a track record than other renewable energy assets such as solar and wind power. The lack of comfort on the part of lenders has meant that the project financing packages available have been generally unappealing, with low gearing and onerous covenants.

Why is energy storage investment restricted?

The traditional approach to energy storage projects has restricted investment because it requires financiers to carry out significant due diligence whenever they fund a scheme – because of this, most energy storage investment has historically been off balance sheet or via specialist funds.

Can a lender lend to renewable assets against a fixed revenue stream?

Lenders have been willing to lend to renewable assets against a guaranteed fixed revenue stream. This may take the form of a contract for difference, or some other sort of government-backed incentive, or a power purchase agreement with a bankable and creditworthy counterparty.

## Financing for Mobile Energy Storage Container Projects

---

**127135,123800 ...**

The financing mechanisms for onsite renewable generation, energy storage, and energy efficiency projects include a spectrum of options ranging from traditional to specialized.
