# Germany Square Solar Design

## Overview

---

How big is Germany's new solar plant?

This solar plant will span 3,459 acres at first, with plans to expand further across 49,421 acres. Its sheer scale makes it one of Germany's most anticipated solar projects. Construction is set to begin in 2026, and operations are expected to start by 2028.

How many solar panels are installed in Germany in 2023?

In 2023, 15.1 GWp of solar PV was deployed in Germany, of which ca. 7 GWp (~46%) were residential systems (<20 kWp in size), 3.9 GWp (~26%) were C&I rooftop systems, and the rest, so 4.2 GWp (~28%) were ground-mounted systems.

How big is Germany's solar capacity?

As of May this year (2024), Germany has 88.9 GWp of installed solar capacity and is therefore well on track to achieve these high ambitions (see chart below). The nation's solar deployment goals are underpinned by robust financial support schemes and progressive regulatory frameworks. Regulatory support for solar in Germany is strong.

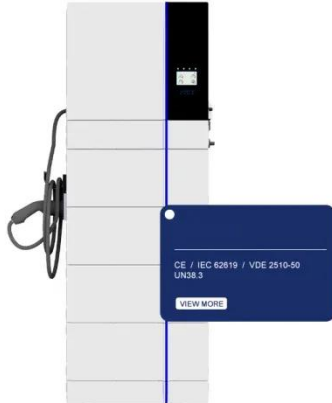

Why is Germany investing in solar energy?

Find out how Germany is investing in large solar projects to help achieve its 2030 target of generating 80% of its electricity from renewable sources.  
What's next for solar energy in Germany?

Germany is steadily advancing toward its 2030 target of generating 80% of its electricity from renewable sources.
