# Glass power generation and energy storage

## Overview

---

Why do we need glass-ceramic materials for energy storage systems?

The demand for next-generation energy storage systems in modern miniaturized electronic components will require glass-ceramic materials that can provide high power, higher energy density, ultrafast discharge speeds, high-temperature stability, stable frequency, and environmental friendliness.

Is glass a potential material for energy storage and photonic applications?

Chakrabarti, A., Menon, S., Tarafder, A., Molla, A.R. (2022). Glass-ceramics: A Potential Material for Energy Storage and Photonic Applications.

What is the energy storage density of glass-ceramics with 1 mol%  $Gd_2O_3$ ?

Glass-ceramics with 1 mol%  $Gd_2O_3$  exhibited a high energy storage density of  $12.14 \text{ J/cm}^3$ , a BDS of  $1818 \text{ kV/cm}$  with a discharge efficiency of 80%, and a discharge time of 25 ns. The BNN glass-ceramics were synthesized by combining conventional and microwave heating.

What affects the energy storage properties of ferroelectric glass-ceramic?

The energy storage properties of a ferroelectric glass-ceramic are significantly affected by the size, grain morphology, and the number of defects of the ferroelectric ceramic phase present in the glass matrix. A crystal phase with large grains can lead to cracks, pores, and other defects in the microstructure which will degrade the DBS.
