Global solar container battery exports in 2025

Overview

Will commercial battery deployments overtake residential build by 2030?

Commercial battery deployments overtake residential build by 2030 in BNEF's latest outlook, thanks to updated assumptions on attachment rates, which refer to the percentage of solar installations that are paired with a battery. Lithium iron phosphate (LFP) remains the prevalent lithium-ion battery chemistry in the stationary energy storage market.

Will sodium-ion batteries hit new heights in 2025?

Expectations for sodium-ion batteries among manufacturers have cooled as LFP prices continue their downward trend, leading to BNEF's lowered expectations for sodium-ion technology to scale. The global energy storage market is poised to hit new heights yet again in 2025.

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.

What are China's new lithium battery export control measures?

China has announced new export control measures targeting a wide range of lithium battery technologies, materials, and manufacturing equipment. The controls cover three major categories: high-performance lithium-ion batteries, cathode materials and precursors, and graphite-based anode materials.
