# **Hanoi solar container communication station uninterrupted power supply settlement policy**

## Overview

---

This study analyzes the factors that have facilitated Vietnam's recent rapid solar and wind power expansion and draws policy insights for other member states of the Association of Southeast Asian Nations (ASE).

Is there scope for solar policy implementation in Vietnam?

There is great scope for a much more sizeable transition to these new and clean energy types. According to our expert interviewees, significant effort has gone into facilitating solar policy implementation in Vietnam.

Can Vietnam have solar and wind expansion without a subsidy?

It is possible to have rapid solar and wind expansion without such an input subsidy, as demonstrated by Vietnam's rooftop solar boom. One interesting point is that Vietnam has been relatively cautious in applying reverse auctions, despite them being popular in the region and further afield.

Why is variable RE a problem in south-central Vietnam?

The absence of an adequate grid system hampers the full utilization of renewable power in the Central and Southern regions and prevents it from meeting the power demand in the North. As a result, the rapid development of variable RE has led to challenges such as congestion and curtailment in South-Central Vietnam.

How can FITs help the solar industry in Vietnam?

FITs have attracted powerful responses from businesses and have enabled the rapid development of the industry, especially in the case of solar. Vietnam's case sets an example of how the government, the industry, and the public can work together toward a greener growth model.
