Havana Field Research Folding Container with Two-Way Charging

100-430KWH

230|400V

Overview

How efficient is the folding wireless charging of a UAV?

The folding wireless charger of the UAV was designed to operate at 138.1 kHz and deliver an output power of 100 W. In the aligned condition, wireless charging efficiency reached 97.66% using the proposed folding coil design. Furthermore, it was achieved with over 85.48% efficiency up to 10 cm misalignment.

Can a foldable coil and charge station be used for wireless charging?

The most suitable wireless charging technique for UAVs is inductive power transfer (IPT). In this paper, a novel foldable coil and charge station design is proposed for the wireless charging of UAVs. IPT is provided by receiver and transmitter coils placed on the drone legs and the charging station, respectively.

How does a folding wireless charge system work?

The transmitter's folding windings provide both alignments for the UAV during landing and increase the magnetic coupling. A folding wireless charge system of the UAV is designed for 100 W output power at a 138.1 kHz frequency. The misalignment tolerance of the proposed design in the vertical axis is examined.

How does a folding WPT charging station work?

The folding WPT charging station and the UAV. The AC grid voltage is converted to DC with a rectifier. DC voltage is changed to the required DC voltage level by the DC/DC converter and applied to the inverter. DC voltage is converted to square wave AC voltage at the desired resonance frequency by the half-bridge inverter.

Havana Field Research Folding Container with Two-Way Charging

Multi-Device Wireless Charging Container

Synopsis This invention introduces a cubic wireless charger with a novel coil design that enables omnidirectional wireless charging ...

Multiple Folding Coils Design for Octagonal Prism-Based ...

Request PDF , On , Kaiyuan Wang and others published Multiple Folding Coils Design for Octagonal Prism-Based Wireless Charging Container with Even Magnetic Flux ...

Investigations on the Use of a Wireless Power Modulator in a ...

realized. Experiment is carried out on a cubic wireless charging container with a diameter of 1m to verify the effects of the WPM. Citation: Shang S, Wang K, Liang R, Tang K, ...

Multi-Device Wireless Charging Container

Synopsis This invention introduces a cubic wireless charger with a novel coil design that enables omnidirectional wireless charging container using only two wires. By ...

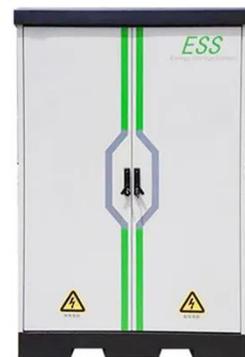

A Cubic Wireless Charging Container System With Highly ...

This article introduces a spatial wireless charging system featuring a cubic transmitter (Tx) designed for strong and uniform magnetic field distribution inside the Tx ...

Design of an omnidirectional wireless charging container

Under such circumstances, this paper proposed a novel designed system for cubic wireless charging containers to achieve both simple coil structure and uniform magnetic field ...

Investigations on the use of a wireless power modulator ...

The two orthogonal folding coils are capable of generating relatively uniform

magnetic fields within the wireless charging container. Operation of a singular coil allows the receiver to ...

Octagonal Prism-Based Wireless Charging Container with ...

Request PDF , On , Kaiyuan Wang and others published Octagonal Prism-Based Wireless Charging Container with Multiple Folded Coils for Even Magnetic Flux Distribution ...

Optimized coil and current flow designs for wireless charging

This paper proposes three different shapes of wireless charging containers (i.e. quadrangular prism, octagonal prism, and hexagonal prism) with optimal current flow designs ...

A Novel Folding Wireless Charging Station Design for Drones

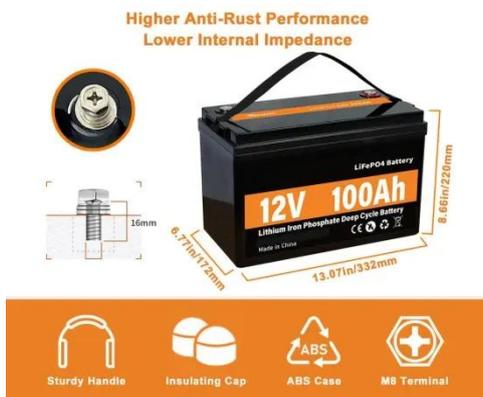

Inductive coupling is the most efficient and reliable method for near-field

wireless charging [8]. An inductive coupling WPT system transfers energy between two coils via ...

Optimized coil and current flow designs for ...

This paper proposes three different shapes of wireless ...

Multiple Folding Coils Design for Octagonal Prism-Based ...

This paper presents an octagonal prism-based wireless charging container with multiple folding coils winding equidistantly around the surface of the container.
