

## BLINK SOLAR

# Have you built solar panels

## Overview

---

Solar energy is a renewable source of energy that not only benefits you but the environment as well. With the effort you put into making a homemade solar panel, you can help prevent environmental pollution.

Should you build your own solar panel system?

By building your own solar panel system, you can build up your technical skills and emergency preparedness. If your system malfunctions, your experience installing it may allow you to repair broken panels or fix common issues in an emergency. It's cheaper to DIY the process and simple enough to figure it out without professional support.

Is DIY solar a good idea?

But as it turns out, DIY solar can mean something more than just installing your own solar panels — it can mean building your solar panels from scratch. While not too common, if you have a knack for major DIY assembly projects, you may want to make your own solar panel components yourself.

How do you build a solar panel?

To build your own solar panel, you'll need to assemble the pieces, connect the cells, build a panel box, wire the panels, seal the box, and then finally mount your completed solar panel. Purchase the cells. There are a few different types of solar cells to buy, and most good options are either made in the United States, China, or Japan.

Can I DIY my solar panel installation?

If you've researched solar energy solutions, you probably know that it's possible to DIY your solar panel installation, often referred to as DIY solar. But as it turns out, DIY solar can mean something more than just installing your own solar panels — it can mean building your solar panels from scratch.
