

## BLINK SOLAR

# Home energy storage project investment

## Overview

---

What is an energy storage project?

An energy storage project is a cluster of battery banks (or modules) that are connected to the electrical grid. These battery banks are roughly the same size as a shipping container. These are also called Battery Energy Storage Systems (BESS), or grid-scale/utility-scale energy storage or battery storage systems.

What is a home energy storage system?

A home energy storage system is an innovative system consisting of a battery that stores surplus electricity for later consumption. Often integrated with solar power systems, these batteries enable homeowners to store energy generated during the day for use at any time.

Where are the energy storage projects being built?

The energy storage projects will be located at three existing SCE power substations: 225 MW at Springvale Substation in Big Creek-Ventura, 200 MW at Hinson Substation in the Los Angeles Basin, and 112.5 MW at Etiwanda Substation in the Los Angeles Basin.

What are the benefits of a home energy storage system?

1. Energy Independence: A home energy storage system allows homeowners to store solar energy generated from renewable sources such as solar panels, allowing homeowners to go off-grid and insulate themselves from frequent price changes. 2.

## Home energy storage project investment
