# Home energy storage station production

## Overview

---

Where is a 100 MWh energy storage station in China?

(A 100 MWh-scale energy storage station using sodium-ion batteries went into operation on Jin Hubei, central China. Image credit: Hina Battery) China has seen another energy storage project using sodium-ion batteries go into operation, as the new batteries begin to gain wider use in energy storage.

Where is China's 10 MWh sodium-ion battery storage station located?

The 10-MWh sodium-ion battery storage station was put into operation on May 11 in Nanning, Guangxi in southwestern China, China Southern Power Grid Energy Storage, the energy storage division of China Southern Power Grid, said on May 11.

How does a home energy storage system work?

A home energy storage system operates by connecting the solar panels to an inverter, which then links to a battery energy storage system. When needed, the power supplied by the energy storage system is converted through an inverter, from AC to DC or vice versa. The power is then supplied to the power grid or home appliances.

How many kWh can a 100 MWh energy storage station store?

The energy storage station can store 100,000 kWh of electricity on a single charge, which can meet the needs of around 12,000 households for a day. (A 100 MWh-scale energy storage station using sodium-ion batteries went into operation on Jin Hubei, central China. Image credit: Hina Battery)
