# Household solar street light split lamp

## Overview

---

What is a split solar street lamp?

The SF series Split Solar Street Lamp is LUXMAN's new split type solar LED lighting solution. It's a revolutionary product that optimizes sunlight absorbing and solar conversion rate with a 100% solar-powered system for self-sustained lighting.

How much does a split solar street light cost?

The split solar street light installation process is more complex since it demands more planning than all-in-one designs. In split systems, each component must be purchased and installed separately. So, the overall all-in-one solar LED street light price, even for a low-power option, can increase by 30-40%, starting from at least \$60-70.

What is a solar street lamp system?

It is composed of solar panels, a lamp head, a lamp pole, based and a control box with the controller and battery. Typically, these street lights are available in two types of solar street lamp systems: 12V and 24V.

What are the different types of solar street lights?

Previous classifications, including solar LED street light, all-in-one, all-in-two, and split systems, describe the internal configuration of the solar street light itself, independent of how it's mounted. They refer to how the system pre-arranges its components – solar panel, battery, LED light fixture, and controller.
