How Outdoor Solar Energy Works

Overview

How does solar power work?

Solar power works by converting energy from the sun into power. There are two forms of energy generated from the sun for our use - electricity and heat. Both are generated through the use of solar panels, which range in size from residential rooftops to 'solar farms' stretching over acres of rural land. Is solar power a clean energy source?

.

What do solar panels do?

Solar panels convert sunlight into electrical energy. They don't make or create energy, but rather transform it from one form to another. Here's how solar energy works step by step: solar panels convert solar energy from sunlight into electrical energy.

How do solar panels generate electricity?

Solar panels turn sunlight into electricity that we can use. Here's a simplified explanation of how home solar panels and a whole solar system generate electricity: Power from the sun is effectively infinite and clean, and solar panels harness this energy to produce electricity.

How does solar & storage work?

Both of these methods can also store the energy they produce for distribution after the sun sets, using cutting-edge solar + storage technologies. Solar exists within a complex and interrelated electricity system in the U.S., working alongside other technologies like wind power to transition the U.S. to a clean energy economy.
