# How big a storage battery should I use for a 200 square meter apartment

## Overview

---

Should you put battery storage in your home?

In short, battery storage in your home can bring the following benefits: Let's say your home has solar panels on the roof or even a wind turbine in the back garden. Without battery storage, a lot of the energy you generate will go to waste.

How much power does a home battery have?

Some batteries offer just 3–5 kW of power—enough for lights, a fridge, and a few other essentials. Quality home battery systems are modular, which means that you can scale both energy storage capacity and output power based on your needs.

How much electricity does a home storage battery use a day?

On average, this works out at just under 5kWh per day. Mark has neither the financial nor practical means to install renewable technology. However, he can use a home storage battery to take advantage of cheaper off-peak electricity rates, perhaps with the likes of the Octopus Flux tariff. Due to its compact size, Mark opts for the Giv-Bat 2.6kWh.

How much battery storage do I Need?

TLDR: As a minimum, aim for battery storage equal to 25% of your daily usage, plus 2 kWh for backup. So if you use 20 kWh a day, don't go smaller than a 7 kWh battery. It probably won't last all night, but it'll usually cover the expensive evening peak. [How Much Battery Storage Do You Need?](#)

It depends what you want your solar battery to do.
