How to convert mAh to kWh?

Voltage is essential to convert charge (mAh) into energy (kWh). For lithium-ion batteries, 3.7V is common. The calculator computes the result and instantly displays the equivalent energy in kilowatt-hours. To convert mAh to kWh, you need to follow these steps: $kWh = (mAh \times V) \div 1,000,000$ This means the battery stores 0.037 kilowatt-hours of energy.

What are Mah kWh & kWh?

Before diving into the calculator, let's clarify the units: mAh (Milliamp-hour): A measure of electric charge over time. Commonly used to denote battery capacity. kWh (Kilowatt-hour): A unit of energy equal to 1,000 watts used for one hour. It's used in electric bills and power consumption.

How many kilowatt-hours in a mAh battery?

For lithium-ion batteries, 3.7V is common. The calculator computes the result and instantly displays the equivalent energy in kilowatt-hours. To convert mAh to kWh, you need to follow these steps: $kWh = (mAh \times V) \div 1,000,000$ This means the battery stores 0.037 kilowatt-hours of energy. You get 0.1 kilowatt-hours of usable energy.

How many Mah does it take to store 1 kWh?

To understand scale, we can reverse the calculation: So, it takes more than 270,000mAh at 3.7V to store 1 kWh of energy. That's like charging 54 phones with 5000mAh batteries. Real systems aren't perfectly efficient. Energy losses occur during: For practical calculations, apply an efficiency factor: Can I use this conversion for all battery types?
