How many watts does a solar street light use in winter

Overview

How much wattage should a street light use?

Recommended Wattage for Solar Street Lights Based on Area & Pole Height
LEDs with 150-200 lm/W efficiency require lower wattage for the same brightness, saving battery power. High-efficiency monocrystalline solar panels ($\geq 18\%$ efficiency) allow optimal wattage utilization.

How much solar power does a street light use?

For a street light that consumes 900WH, after calculation, the battery panel power required by the former $= 900 * 1.333 / 6.2 = 193.5$ Wp, and the battery panel power required by the latter $= 900 * 1.333 / 4.6 = 260.8$ Wp. From this we can conclude that the more sunlight there is, the smaller the solar panels you need and vice versa.
